

WEST Engineering Selects the West Houston Energy Corridor for New Headquarters

Updated 25 Jan 2012 – WEST Engineering Services, a full-service drilling equipment consulting, services, and training company, has selected the “Energy Corridor” in the West Houston/Katy area as the location for its new global headquarters.

WEST recently purchased a 44,077-square foot, single-story building located on a 3.1 acre tract at the intersection of Park Row and Park Ten Boulevard. After extensive renovations, WEST plans to move into the new facility in the 2nd quarter of 2012. Below is an architectural rendering of the finished headquarters.

Founded in Scotland as WEST Limited in 1984 by Michael and Janet Montgomery, WEST Engineering is a full-service drilling equipment consulting, survey/assessment, training and equipment services company. The Montgomery's moved the company to Houston in 1988 to establish proximity to WEST's sizable customer base of international oil companies, drilling contractors and equipment manufacturers located in the Houston area.

Today, WEST is widely recognized as a preeminent industry leader in the fields of well control equipment and drilling systems surveys, and is also an industry leader in technical risk assessments and drilling equipment training. Michael Montgomery says “*WEST has experienced record-setting growth... We are excited about the impact our services have, and look forward to the challenges presented to us as the industry faces new directions in the coming years.*”

Along with their expansion in Park Ten, WEST will continue operations in Brookshire/Waller County, where WEST and the Montgomery family will continue to support and participate in civic, business and community service organizations. The historic Cotton Gin location in Brookshire will remain a part of WEST operations.
